

CASE STUDY

BTG

Summary:

- Large project for a growing pharma company in their brand-new research centre
- 25 x Airone R (combination of standard, bespoke and walk-in) ductless fume cupboards installed for research chemistry
- Ductless cupboards selected due to impracticality and cost of installing duct

Detail:

BTG was an international specialist healthcare company that focused in three business areas: Interventional Medicine, Specialty Pharmaceuticals and Licensing. They were acquired by Boston Scientific in 2019.

In 2014, BTG opened their brand-new office and research site in Camberley, UK. Designed exclusively with 25 of Safelab's Airone R recirculating fume cupboards, the site achieved 70% energy recovery compared to their previous sites using ducted units supplied by others.
