Rutherford Appleton Laboratory - Harwell

Safelab are proud to have recently installed the first batch of our Airone XP4 VAV Fume Cupboards across 2 laboratories at the Harwell complex. The two laboratories are state of the art for the MRC (Medical Research Council). These were fitted with TEL VAV Controllers, PIR sensors and 90 minute fire rated storage cabinets.

The customer's view

“Working with Safelab has been an absolute pleasure. Whether discussing the different autosash or PIR options or canvassing opinions on ductwork, I've been extremely happy with their professionalism and with the final product. Our XP4s are so easy to maintain compared to the older models I'm used to, and with through-panel LED lighting, intrinsically safe airflow sensors and an integrated FireTrace system, they give me the safety features I need to accommodate whatever chemistry we decide to perform in future.”

Robert Mart
Laboratory Manager
